

Individual Reflection

Working on the plagiarism detection project was a good learning experience for me because it helped me understand how the programming concepts we study can be used to solve a real problem. At first, I thought plagiarism detection would be a simple process of comparing two texts. But while doing the project, I understood that there are different steps involved, such as taking the text as input, processing it, finding similarities and showing the final result.

One of the main things I learned was how important it is to organize the program properly. Instead of writing everything in one place, we divided the work into different functions and parts. This made the code easier to understand and also helped us find and correct errors more easily.

I also got a better understanding of how text comparison works. By trying different sentences and paragraphs, I could see how the system identifies similarities between texts. This made the topic more interesting because I was able to see the concepts working instead of just learning them from notes or theory.

Testing the program was another important part of my experience. We used different inputs to check whether the system was giving the expected result. Sometimes the output was not what we expected, so we had to go through the code and find the problem. This taught me that debugging and testing are just as important as writing the program.

Working with my team also helped me improve my communication and teamwork skills. We divided the tasks between us and discussed the problems we faced while combining the different parts. I learned that even if my own part works correctly, the complete project may still have issues when all the parts are connected.

Overall, this project gave me more confidence in programming. I learned more about handling text, writing functions, testing, debugging and working as a team. Most importantly, I understood how programming can be used to solve a real-world problem like identifying plagiarism. I believe the experience I gained from this project will help me in my future projects and programming work.
